Re: The Net Stable Funding Ratio and Credit Union Investments in Bank Term Deposits

Dear Sir or Madam:

The European Network of Credit Unions (ENCU) wishes to thank the European Commission for the opportunity to comment on the European Union's implementation of the Basel III Net Stable Funding Ratio (NSFR) and its impact on credit unions. ENCU represents more than 1,500 cooperative credit unions in Estonia, Ireland, FYR Macedonia, the Netherlands, Poland, Romania, Ukraine and the United Kingdom with approximately €21 billion in total assets. ¹ Our member credit unions serve over 7 million physical Europeans, many of whom are people of modest means or small business owners.

Credit unions that invest in bank term deposits are indirectly impacted by the NSFR even though European credit unions are generally exempt from the NSFR pursuant to Article 2(5) of the CRD IV.² Early phase-in of the NSFR in the Republic of Ireland significantly reduced the yields that Irish credit unions received on term deposit investments—because the reserves required by the NSFR increased the banks' effective cost of funds—even though credit unions' deposits in banks were sticky and stable during the financial crisis.

We urge the Commission to accord treatment to bank deposits made by credit unions under the NSFR that is consistent with the Commission's approach to short-term deposits made by credit unions pursuant to the Liquidity Coverage Ratio (LCR), which assigned a 40% run-off rate to bank deposits made by credit unions.³

Specifically, we urge the Commission to categorize credit unions' investments in bank term deposits with 1 to 12 months duration as at least 50% Available Stable Funding (ASF). The European Banking Authority (EBA) recommended that the Commission treat deposits made by credit unions consistently under both the NSFR and

L 176/338, Art. 2(5), available at <http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=CELEX:32013L0036:EN:NOT>

³ Commission Delegated Regulation (EU) Commission Delegated Regulation (EU) 2015/61 of 10 October 2014 to supplement Regulation (EU) No 575/2013 of the European Parliament and the Council with regard to liquidity coverage requirement for Credit Institutions, 2015 O.J. L 11/1, Art. 28, available at <http://eur-lex.europa.eu/legal-content/EN/TXT/?uri=OJ:L:2015:011:TOC>; see also EBA, *Report on impact assessment for liquidity measures under Article 509(1) of the CRR*, at p. 57 (Dec. 2013).

the LCR in its *Report On Net Stable Funding Requirements under Article 510 of the CRR* (December 2015) by assigning a 50% ASF to bank term deposits made by credit unions with 1 to 12 months remaining duration.⁴

The EBA's report on the NSFR states in relevant part:⁵

The risk credit unions face in the context of the Basel NSFR definition is the treatment that their bank deposits may receive in the NSFR of the bank receiving them and how it could impact the yield these deposits may earn and consequently the general sustainability of credit unions. At present, since they are formally considered financial customers, the ASF factor to be applied following the Basel NSFR definition would be 0% if the deposits mature within 6 months, 50% if the maturity is between 6 and 12 months, and 100% if the maturity is above 12 months. In the case of non-financial depositors, the factors are the same except for the below six months bucket, in which case the applicable factor is 50%.

Consideration should be given to the possibility of extending the treatment envisaged for non- financial bank depositors in the NSFR to credit unions when acting as bank depositors (as in the LCR treatment), due to the potential unintended consequences that could be triggered if they were considered financials in this context. [Emphases added]

The full text of the EBA report section with recommendations on "Credit unions and the NSFR" is included in Annex A of this letter, below. Credit unions' bank deposits are sticky and stable because credit unions view bank deposits as a "flight to safety" in times of economic uncertainty, and also because credit unions have few other options for investing their excess liquidity under national credit union rulebooks. Member States' credit union laws typically limit credit unions' investment options to bank deposits, loans to members, and government-guaranteed debt. Most credit unions invest only in bank deposits and loans to their members because these investments are easier to manage than government bonds.

We urge the Commission to recommend treatment for credit unions' bank deposits under the NSFR that is consistent with the LCR's approach, as recommended by the EBA in its December 2015 report to the Commission. We believe that assigning the 50% ASF recommended by the EBA to bank term deposits made by credit unions with 1 to 12 months remaining duration would be consistent with the treatment of credit union deposits under the LCR.

We have included with this letter data regarding credit unions' investments in bank term deposits in: (1) Ireland (including both the Republic of Ireland and Northern Ireland) from the Irish League of Credit Unions; (2) Poland from the National Association of Savings and Credit Unions of Poland; and (3) Great Britain (i.e. England, Scotland and Wales) from the Association of British Credit Unions, Ltd. and the Bank of England-Prudential Regulation Authority.

This data, below, illustrates the sticky and stable nature of credit unions' deposits held by banks over time. We believe that the data strongly supports according treatment to credit unions' investments in bank term deposits subject to the NSFR that is consistent with the Commission's approach to short-term deposits made by credit unions under the LCR.

⁴ EBA, *Report On Net Stable Funding Requirements under Article 510 of the CRR*, at 197-199 (Dec. 2015), available at <https://www.eba.europa.eu/documents/10180/983359/EBA-Op-2015-22+NSFR+Report.pdf>.

1. Irish Credit Unions' Investments in Bank Term Deposits

ENCU has detailed data on Irish credit unions' investments in bank term deposits because the Irish League of Credit Unions' monitoring department collects this type of data from its member credit unions as part of the administration of its institutional protection scheme. The Irish League has members in two Member States and therefore the below data includes credit unions in both the Republic of Ireland as well as Northern Ireland in the United Kingdom.

Quarterly stocks of Irish credit unions' investments in bank term deposits between March 2011 and March 2016 are included in Annex B of this letter. This data includes breakdowns of credit unions' investments in bank term deposits both by the banking institution holding the deposits and by duration. The most recent available data (from March 2016) for Irish credit unions' investments in bank term deposits is immediately below:

March 2016						
Investments by counter party	Amount €	%		Investments by duration	Amount €	%
Bank of Ireland Group amount	€ 1.952.630.567	19,6%		On demand	€ 1.516.289.636	15,2%
Irish Life and Permanent amount	€ 1.863.194.485	18,7%		1 - 7 days	€ 174.600.143	1,7%
AIB Group amount	€ 1.793.965.490	18,0%		7 days - 1 month	€ 482.022.608	4,8%
Royal Bank of Scotland amount	€ 852.207.220	8,5%		1 - 3 months	€ 986.746.649	9,9%
Rabobank amount	€ 823.318.706	8,2%		3 months - 1 year	€ 1.183.762.558	11,9%
Irish and EEA State Securities amount	€ 655.990.728	6,6%		1 - 5 years	€ 4.864.361.574	48,7%
KBC Bank NV amount	€ 582.724.653	5,8%		5 - 7 years	€ 623.192.093	6,2%
Investec amount	€ 490.997.054	4,9%		7 - 10 years	€ 154.675.380	1,5%
Central Treasury Managed Fund ('Cash') a	€ 185.609.032	1,9%		> 10 years	€ 2.052.867	0,0%
Other	€ 787.065.573	7,9%			€ 9.987.703.508	
	€ 9.987.703.508					

This data and the historical quarterly data included in Annex B of this letter show that Irish credit unions' deposits in banks have been generally stable, and have actually increased by nearly € 3 billion since 2011 despite the relatively lower yields Irish credit unions are now receiving on term deposits in 2016 compared to 2011.

2. Stocks of Polish Credit Unions' Investments in Bank Term Deposits

The ENCU's member organization in Poland, the National Association of Savings and Credit Unions, has provided us with data on the current stocks of Polish credit unions' investments in term deposits as of the end of April 2015. The current stocks of Polish credit unions' investments in bank term deposits by duration are as follows:

Polish Credit Unions' Term Deposit Investments by Duration – April 2015	Amount (PLN)	Percentage of Total Term Deposit Investments Made by Polish Credit Unions
Stocks of Term deposits <1 month duration:	44.276.804 PLN	18,3%
Stocks of CUs' investments in term deposits with 1-6 months:	155.772.990 PLN	64,4%
Stocks of CUs' investments in term deposits of 6-12 months:	37.873.359 PLN	15,7%
Stocks of Term deposits >12 months:	4.028.110 PLN	1,6%
Total:	241.951.263 PLN	100%

3. Stocks of British Credit Unions' Investments in Bank Term Deposits vs. Cash (2004-2013)

The Association of British Credit Unions Ltd. (ABCUL) represents credit unions in Great Britain (i.e. England, Scotland and Wales) and requested the below data from the Bank of England-Prudential Regulation Authority (PRA)—the prudential regulator of British credit unions—in order to respond to the EBA's data request.

The below data includes all British credit unions whether or not they are members of ABCUL. However, the PRA's data-set does not include details concerning the durations of the credit unions' term deposit investments. Rather, the PRA's data only distinguishes between demand deposits (i.e. "cash") subject to the LCR and term deposit "investments" that would be subject to the NSFR in most cases. The limitations of the data collected by the PRA means that we are unable to determine either the initial term of these deposits or the remaining duration of these deposits. We are however able to provide 10 years of data regarding British credit unions' stocks of term deposit investments from year-end 2004 to year-end 2013:

	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013
Term Deposit Investments	54,432	60,504	67,680	66,810	70,202	90,858	104,521	115,648	160,461	194288.53
Cash/Current Account Balances	56,885	59,263	68,456	69,665	77,140	115,662	134,726	164,502	188,925	249016.57
Total assets	432,031	466,728	505,034	548,453	595,142	674,152	751,483	857,918	956,614	1086360.97
Cash / assets	13%	13%	14%	13%	13%	17%	18%	19%	20%	23%
Investments / assets	13%	13%	13%	12%	12%	13%	14%	13%	17%	18%

Conclusion

We believe that this data justifies treating credit unions' term deposit investments which are subject to the NSFR in a manner that is consistent with the LCR's treatment of credit unions' bank deposits. As the data above and in Annex B, below, illustrates, European credit unions engaged in a "flight to safety" during the financial crisis by increasing their bank deposits during period of significant financial stress. These deposits have stayed sticky and stable. Credit unions in future financial crises will likely again engage in a "flight to safety" by investing their excess liquidity in local bank deposits because they view bank deposits as a safe investment and have few other investment options.

European credit unions are also themselves unlikely to be subject to deposit runs by their physical person members. Meaning that credit unions are also unlikely to withdraw their deposits from banks prematurely because of liquidity needs. Members of EU credit unions significantly increased their deposits in credit unions during the financial crisis in a similar "flight to safety". We have no reason to believe that this would be different in the future, especially considering that members' savings with credit unions are protected by the applicable national deposit guarantee scheme in most EU Member States that have a credit union movement.

A 50% ASF rating for credit unions' bank term deposits of 1 to 12 months would be consistent with the LCR and a logical extension of the LCR standard. Conversely, it would be illogical—and possibly create opportunities for regulatory arbitrage by banks—if credit unions' investments in bank term deposits were treated less favourably under the NSFR than they are treated under Article 28 of the LCR.

In addition, not-for-profit credit unions achieving reasonable yields on their investments in term deposits is essential to efforts to promote financial inclusion in Member States where credit unions operate.

Currently, many European credit unions are experiencing historically low levels of loan demand from their members (many of whom are apparently not confident enough about their personal financial situations to seek loans). Consequently, these credit unions need to be able to achieve reasonable yields on their term deposit investments in order to be able to continue to provide their members with financial services at fair rates.

We believe that, as a public policy matter, the NSFR's potential to effect financial inclusion negatively alone would justify treating credit unions' investments in term deposits in a manner that is consistent with and at least as favourable as the LCR's treatment of credit unions' bank deposits.

The ENCU appreciates the opportunity to provide the European Commission with our comments on the NSFR and related data on credit unions' investment in bank term deposits. Please do not hesitate to contact me or Jim Rusagara at +32 2 626 9500 should you have any questions or need any additional information.

Sincerely,

Michael S. Edwards
Vice President and General Counsel
European Network of Credit Unions
World Council of Credit Unions

Annex A—European Banking Authority Report on Net Stable Funding Requirements under Article 510 of the CRR (Dec. 2015), Section 11.4 “Credit unions and the NSFR” (pp. 197-199):

<https://www.eba.europa.eu/documents/10180/983359/EBA-Op-2015-22+NSFR+Report.pdf>

11.1 Credit unions and the NSFR

European credit unions are not-for-profit financial co-operatives with a significant presence in some EU jurisdictions (mainly the UK and Ireland). Their investment is mainly limited (to a great extent for legal reasons) to loans to members, government-guaranteed bonds, bank bonds, and bank deposits. Their funding is basically via savings deposits from members. These limited activities reduce their risk profile but also their income sources to maintain the credit union as an economically sustainable enterprise.

Even though they are classified as financial customers in accordance with Article 411 (1) of the CRR, their liquidity risk profile has been assimilated in the LCR DA with that of non-financial institutions, since their deposits placed with banks have the same outflow rate as the one envisaged for deposits from non-financial customers.

Irish credit unions are not subject to the LCR in accordance with Article 2 (5) of the CRD and would consequently not be subject to the NSFR.

The risk credit unions face in the context of the Basel NSFR definition is the treatment that their bank deposits may receive in the NSFR of the bank receiving them and how it could impact the yield these deposits may earn and consequently the general sustainability of credit unions. At present, since they are formally considered financial customers, the ASF factor to be applied following the Basel NSFR definition would be 0% if the deposits mature within 6 months, 50% if the maturity is between 6 and 12 months, and 100% if the maturity is above 12 months. In the case of non-financial depositors, the factors are the same except for the below six months bucket, in which case the applicable factor is 50%.

Consideration should be given to the possibility of extending the treatment envisaged for non-financial bank depositors in the NSFR to credit unions when acting as bank depositors (as in the LCR treatment), due to the potential unintended consequences that could be triggered if they were considered financials in this context.
